

VIDEOFORGE HDMI

STANDALONE TEST PATTERN GENERATOR

Reference HDMI test patterns for CalMAN display calibration software.

Reliable Patterns

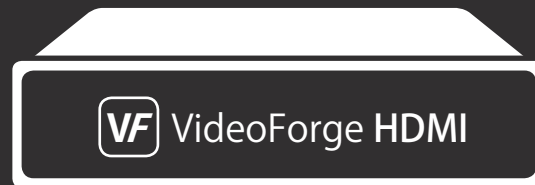

Accurate, reliable video test patterns for precise color measurements.

Fast Automation

Completely automated with CalMAN software for fast pattern generation.

Rugged Construction

Built from a solid piece of extruded aluminum for lasting durability.

Wireless Connectivity

Connect with CalMAN automatically over the network, no cords required.

Software Architecture

Unique software engine means easy updates without replacing hardware.

Compact Design

Weighs in at only twelve ounces for easy storage or frequent travel.

Unlimited Patterns

RGB triplet pattern renderers provide complete grayscale, CMS and luminance sweeps, as well as ColorChecker swatches and custom patterns via USB.

HDMI Output

The VideoForge outputs highly accurate, reference-level video test patterns via HDMI and supports standard and high definition resolutions of up to 1080p60.

Web-Based Interface

A unique web-based command interface allows users to control the VideoForge HDMI online without downloading any auxiliary software.
